

piboxd - Bug #382

Server mounts its own SMB shares

31 Aug 2014 18:36 - Hammel

Status:	Closed	Start date:	31 Aug 2014
Priority:	Immediate	Due date:	
Assignee:	Hammel	% Done:	100%
Category:		Estimated time:	0.00 hour
Target version:	0.9.0		
Severity:	01 - Critical		
Description			
The mount should test if the remote server has the same IP as itself, or some other method of identifying itself.			

Associated revisions

Revision 0e135699 - 01 Sep 2014 14:21 - Hammel

RM #382: Added isThisMyIP() to utils that is called from getNMBList() to make sure not to mount the local host's own SMB exports.

History

#1 - 01 Sep 2014 13:52 - Hammel

- Status changed from New to In Progress
- % Done changed from 0 to 50

Added isThisMyIP() to utils and call it in smb.c:getNMBList() to avoid mounting the local machine's SMB exports. This seems to work well on the server. Need to test that it has no ill effect on the client.

#2 - 01 Sep 2014 14:23 - Hammel

- Status changed from In Progress to Closed
- % Done changed from 50 to 100

Verified working on both server and client. All changes committed and pushed upstream.

Closing issue.
